

AVerTV Volar M

Explore More Entertainment from Your Mac!

What makes Mac different? The terse and easy-to-use user interface? Or the polished and stylish design? I bet you can come out more than I can do. Without the bulky and dull looks, Mac always attracts people's gazing with its look and functions. "Simple is the best" can only describe its intuitive UI. The high stability and multi-functionality are just the main reason contributing the popularity of Mac. Seizing the spirit of Mac, AVerMedia develops the all new DVB-T stick for Mac. Except the stylish mini shell, it also comes with AVerTV for Mac application, a "painless" TV software making your Mac OS Tiger and Leopard a TV set and a PVR.

With AVerTV Volar M, watching TV on your Mac can be as easy as using an iPod! You may just use Apple Remote to switch channels, playback/pause videos and adjust the volume. Even watching TV just in front of your Mac, you can still call out main functions like switching channels, recording, screen capturing, even TimeShifting from the virtual remote control on the screen. The smart AVerTV for Mac can also detect if AVerTV Volar M is inserted properly. When AVerTV Volar M is inserted, AVerTV for Mac will turn on automatically. When you pull out AVerTV Volar M, the TV window will be closed immediately.

Inside the simple UI, you can dig out a lot of useful features from AVerTV for Mac. The PIP function makes you watch live TV and video at the same time. The screenshot function preserves all precious scenes you love. With its EPG and scheduled recording functions, you don't have to worry about missing any favorite show when you are not at home.
